TERRAHASH ENERGY / CORPORATE INFORMATION

International Shareholder & U.S. Corporate Structure

California corporate identity, international investment, and U.S. management

DOCUMENT	TH-CI-12 | Public Corporate Information
COMPANY	TerraHash Energy LLC | California, USA

The California company operates under the TerraHash Energy name and uses its Los Angeles base to direct U.S. business activities. Its registered entity record establishes a distinct California legal presence for commercial development, executive management and business relationships in the United States.

The entity number and amendment filing details shown below provide a direct reference to the California Secretary of State business record. This public corporate identity information is presented separately from the operating history of international businesses sharing the TerraHash Energy brand.

California corporate identity

TerraHash Energy LLC is a California limited liability company based in Los Angeles. The California Secretary of State issued its Business Amendment Filing Approved acknowledgment on September 26, 2026, for an amendment filed September 23, 2026.

Corporate record	Information
Legal name	TerraHash Energy LLC
Entity type	California Limited Liability Company
California entity number	B20260383401
Business address	333 S Grand Ave, Floors 28–30, Los Angeles, CA 90071
Amendment filed	September 23, 2026
Amendment approved	September 26, 2026
Amendment document number	BA20261821258

Hong Kong shareholder investment

TerraHash Energy LLC has received capital investment from its Hong Kong shareholder. The shareholder relationship connects the company with TerraHash Energy's international business experience, while the California LLC carries out its U.S. business through a distinct legal entity and U.S. operating structure.

The company's Hong Kong shareholder provides an international capital relationship that connects the U.S. business with experience accumulated across the broader TerraHash Energy enterprise. The California company manages its own U.S. operating agenda, contracts, personnel and commercial development activities through its U.S. leadership.

The shareholder relationship and the operating structure serve different functions: ownership and capital participation support the enterprise, while executive management directs the day-to-day development of the U.S. company's business.

U.S. executive management

Natalie Hayes serves as Chief Executive Officer and Executive Director and leads the company's U.S. executive management and business operations. Her management responsibilities include corporate strategy, organizational leadership, operating priorities, and energy infrastructure development in the United States.

Natalie leads the coordination of U.S. business strategy, executive and functional teams, organizational priorities and development opportunities. The company's professional functions support management through employee administration, recruitment coordination, financial research and market analysis.

This management framework enables the California company to develop business capabilities while remaining clear about the responsibilities of its U.S. executive leadership and the separate role of its Hong Kong shareholder.

International business history and current U.S. development

TerraHash Energy's published international history spans renewable energy, energy storage, grid and power infrastructure, capital programs, and managed computing. The Corporate Performance and Milestones pages present these historical activities and associated periods. They provide business context for the U.S. company's energy-led infrastructure development.

TerraHash Energy LLC focuses on building U.S. operating capabilities, evaluating energy and infrastructure development opportunities, and advancing commercial relationships. International historical performance is presented separately from the California company's own operating activities and results.

The international history describes earlier work across renewable-energy applications, power and storage systems, grid-related infrastructure, capital programs and managed computing. These activities are part of the company's published commercial background and inform its current energy-first development direction.

The U.S. business applies that experience to assessing site and power requirements, forming commercial relationships, exploring project economics and developing the operational systems needed for infrastructure activity. Published international historical capital figures describe their respective programs and periods; they are not presented as a statement of the California LLC's current cash balance.

Corporate Identity and Legal Presence

TerraHash Energy LLC maintains a California legal identity that provides the foundation for its U.S. management, commercial relationships and operating development. The Los Angeles base serves as the center of the company's U.S. business activity and corporate presence.

Ownership Relationship and Capital Support

The Hong Kong shareholder relationship supports the company through capital investment and a connection to TerraHash Energy's broader international business background. This ownership relationship contributes enterprise support while remaining distinct from the company's day-to-day U.S. executive management.

U.S. Operating Direction

Natalie Hayes leads U.S. executive management and business operations. Under this management structure, TerraHash Energy LLC directs its U.S. business priorities, organizational leadership, infrastructure development activity and commercial coordination through its California company.

Business Context and Development Focus

TerraHash Energy presents its international business history as part of the broader enterprise context for the U.S. company. The California LLC applies that experience toward energy-led infrastructure development, operational planning and commercial growth in the United States while maintaining its own legal and operational identity.
